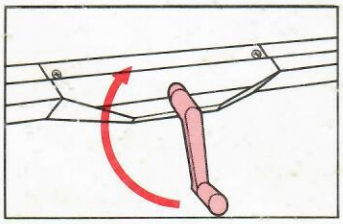
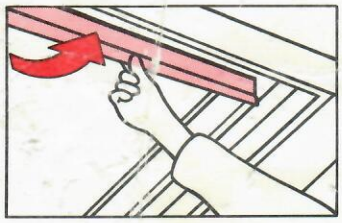
Opening Window and Ventilation Flap

1



2



1. To open window, crank handle clockwise to desired position.
2. To open ventilation flap, remove screen by pulling clips inward. Set screen aside. Pull ventilation flap upward as shown.

Maintenance

Wood should be treated with preservative or paint shortly after installation and be maintained regularly (factory treated with alkyd basic treatment). Grease fittings and wash filter twice a year. Clean flashing once a year.

Condensation

In all homes condensation is created by normal living. Older homes are unlikely to have this problem due to natural air circulation. New homes, in many cases have a greater condensation risk due to high insulation, particularly in the drying period.

It is therefore, important to air the rooms and maintain the woodwork regularly.

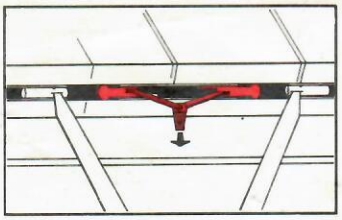
Condensation on your VELUX roof window indicates that the room needs airing and that the room temperature should possibly be raised by a few degrees. Furthermore, it is important to ensure a free flow of air over the glass.

Accessories

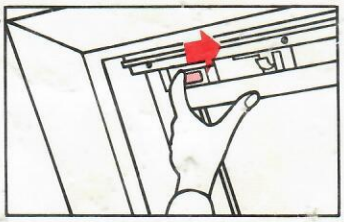
VELUX offers accessories for your VELUX roof window Model TPS. VELUX roller blinds are available in three colors: beige — Type RUDS, brown — Type RUCS and blue — Type RUBS. Our semi-transparent, Type MNCS, awning diffuses light yet allows a view outside. Replacement screen Type ISS can also be ordered. Contact VELUX-AMERICA INC. for further details.

Cleaning

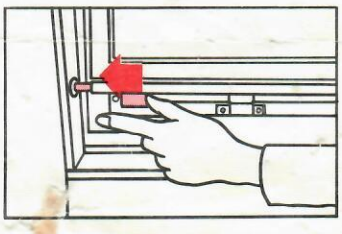
1A



1B



2



3

1. Remove screen by pulling clips inward. Set screen aside. Crank window to full open position.

   Pull small finger handle to make slide pin fold up. Disconnect operator arms. See detail 1A.
   Open ventilation flap and release barrel bolts on both sides. See detail 1B.
2. Reverse window sash and lock sash to frame with barrel bolts.
3. After cleaning, reverse sash to normal open position. Slide barrel bolts to lock sash at top. Reconnect opener.
